

VLAN's Challenge

1. Check each VLAN for correct configuration and fix any errors.
2. All VLAN's should be configured with a DHCP server. No static IPs should be used for clients.
3. You should be able to ping any of the servers with its hostname.
4. Server100 is a web server and should be able to be reached from any computer.
5. The challenge is complete when you have documented all errors and you have verified they have been fixed.

Hint: There are at least 5 errors.
